01**Brief Introduction to Chinese Economists Society**

The Chinese Economists Society (CES) is a non-profit academic organization registered in the United States. The CES strives to promote scholarly exchanges among members and contribute to the advancement and dissemination of economics and management sciences in China.

Over the years, more than 3,000 individuals have joined the CES from academia, research institutions, and other public or private organizations throughout North America, Asia, Europe, and other regions of the world. CES members are in leadership positions in government agencies, universities, research institutes, multinational firms, and international organizations including the People's Bank of China, the World Bank, and the IMF. The CES is considered the most influential group that bridges academic exchanges in economics and management sciences between North America and China.

To promote scholarly exchanges among its members, the Society holds annual conferences, with its first conference held in Princeton, NJ in 1985. In order to promote market-based economic reforms in China, the Society has organized its Annual Conference in China since 1993, often jointly hosted with a Chinese university. The CES conferences have been widely attended by internationally renowned economists, senior government officials, and business leaders. The Society also organizes themed North America conferences. The CES conferences have had profound policy impacts on China's market-oriented transition and reforms as well as economic development strategy.

In 1989, the CES launched an English-language journal, China Economic Review (CER), which in just a few years achieved worldwide circulation and became an influential academic periodical on China's economy. The CES became a member of the Allied Social Sciences Association (ASSA) in 1992 and has sponsored independent and joint sessions with other associations at annual ASSA meetings since then.

The CES is committed to serving its members and promoting the scholarly exchange between academic and research communities in North America and in China.
